DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1-7, 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over von Erichsen (US Pat. 5,002,121) and Fallon (US Pat. 2,863,644).

Von Erichsen discloses a duct leading to a bypass and duct leading of a heat exchanger are arranged at the output side of the gas turbine. Flaps can close the two ducts alternately. Pivotal guide plates are arranged in the branching area of the two ducts. The guide plates are pivoted by linkages connected to the flaps in the duct leading to the heat exchanger, so that, when the flaps in the bypass are open, the guide plates are inclined relative to the flow of combustion gases and deflect the flow into the duct leading to the bypass. When the flaps in the bypass are closed, the guide plates are pivoted to extend parallel to the flow of combustion gases. In this position, the guide plates do not provide any resistance to the flow of combustion gases to the heat exchanger. (abstract, figures, col. 2, lines 5-68, col. 3, lines 1-43, col. 4, lines 1-13)

Von Erichsen uses flaps but does not teach the use of a butterfly valve. Fallon discloses a regenerative heat exchange device. The pipes leading from the heat exchange form a T-piece having a butterfly valve. (abstract, figures, col. 3, lines 19-38, col. 6, lines 10-25) it would have been obvious to one of ordinary skill in the art at the

time of the invention to use a butterfly valve, as taught by Fallon in the Von Erichsen system because these are merely design choices and are just different types of valves (flaps).

Allowable Subject Matter

Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the claim as supported by the specification differs from the prior art in that it does not teach a single guide plate that is rectangular, circular or oval shaped.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See US PTO-892.
